

Andrii Shupta

Lead Full Stack Developer

<https://linktree.com/andriishupta>

I build reliable applications fast, with 10 years of experience as a full-stack web developer.

I mainly work with TypeScript, React, Next.js, Node.js, NestJS, Supabase.

Vibe Engineering with Codex, Claude, v0 and more.

Degree in Computer Science.

Skills

Front-end

- React / Next.js
- Redux / ContextAPI / Apollo / react-query
- Tailwind / ChakraUI / Material-UI / AntDesign
- Angular and others

Back-end

- Node.js / NestJS / Express.js / Hono.js
- RESTful API / GraphQL
- Monolith / Microservices

Cloud

- Supabase: Database / Auth / Storage
- AWS: Serverless Framework, Lambda, API Gateway, Step Functions, S3/SQS/SNS
- Experience with GCP, Azure, Vercel, Cloudflare and more

Database/Events

- PostgreSQL/MySQL
- MongoDB
- Redis / Kafka

Other skills

Other languages: Python, Gleam, PHP, Java, Dart, Kotlin

Practices: Scrum, Extreme Programming, delegation/planning, web app architecture, payment systems architecture

Latest experiences

2023.02 - present / Lead/Principal Full Stack Developer

Full time

1. Principal Full Stack Developer on the sport-related management & analytics platform

- Lead development of new functionality
- Process tons of information and work with Google BigQuery
- Process data from 3rd-party API
- Develop company-wide SDK and UI libraries

Tech stack: **React**, **Node.js(fastify)**, GCP: Google **BigQuery**, PostgreSQL/MySQL, Drizzle/Prisma

2. Principal Full Stack Developer on the Ticketing Platform project

- Lead development of new features with React micro-frontends approach
- Create a new Microservice architecture to replace a legacy system
- Partially support legacy PHP codebase

Tech stack: **React**, **Node.js**, MySQL, **Redis**, **Kafka**.

3. Development from scratch a custom CMS system for the retailer industry for an Upwork client.

- Create and architect the project from scratch.
- Manage tickets, plan features, propose improvements
- Do Quality Assurance
- Setup CI/CD
- Use 3rd party API for content creation with AI
- Extensive work with SQL: writing custom procedures, Text-Search API, etc.

Tech stack: **NextJS 13 App Router**, **Supabase**(Database, Auth, Storage), **OpenAI API**, 3rd party retailer-specific APIs.

4. Consulting for Web3 platform

- Consult on Supabase usage: Auth, RLS, Performance
- Providing best practices for NextJS 14
- Code Review and enhancement suggests

Tech stack: **NextJS 14 App Router**, **Supabase**(Database, Auth).

Experience #2

Intellias: 2021.02 - 2023.02(2 years) / Lead/Key Full Stack Developer
Full time

For the project related to digital assets, I worked on a high-load area, on the core API layer for fetching and maintaining account information. With the help of caching with Redis achieved near zero time response for clients to retrieve actual account information.

For the entertainment project, together with the team, we have built a new payment approach with funding sources, updated legacy invoicing & billing, made a tone of migrations to the database, and many more changes to support this approach on 10+ services: introduced AWS StepFunctions, new StripeAPI integration, transfer to TypeScript. I have extended knowledge of working with microservices, gained more experience as a lead developer, and had an extensive list of duties related to legacy and L3 tracking.

- Led concrete front-end teams / sub-teams and played a key role in both FE and FS projects
- Grew company both from our and client's side: did ~20 interviews
- StepFunctions / Stripe webhook / Usage of Kafka Aiven speed up and made our process less error-prone
- Migrated thousands of companies and millions of gifts
- Applied my previous knowledge to help start transitioning to the Agile/Scrum process

Worked with: **React, Node.js with AWS, MongoDB Atlas**, extensive **StripeAPI** usage; **Nest.js with AWS** and **Redis** as a cache layer

Experience #3

EPAM Systems: 2019.06 - 2021.02(1y 9 months) / Senior Full Stack Developer
Full time

I have gained a lot of knowledge of building highly scalable apps the right way, got more experience as a lead developer, observed how a good delivery system works, and applied all this knowledge to become a better part of an end product during the development process. I had extensive duties and achievements and played the Key/Lead Developer roles.

Some of the achievements that helped clients to have a better product and faster delivery experience:

- Led front-end teams / sub-teams and played a key role in both FE and FS projects
- Was the primary interviewer for projects(15+ inner interviews)
- Moved large Angular application to NX monorepo, which helped to reduce building time from 30 minutes to 15 minutes
- Replaced Jasmine to Jest, which reduced testing time of 500 tests and the final pipeline time to under 10 minutes
- Applied my previous knowledge to resolve conflicts between FE and BE developers and integrated the "Contract API" approach
- Applied my previous knowledge with "Implementation Plan" for Stories / Tasks - in this way, less experienced developers could follow the best approaches and methods in implementation
- With team completed every sprint without Blockers/Critical issues in the production.

Also, I actively participate in EPAM's Non-Projects activities:

- Lecturer at 2 EPAM's events
- Lecturer on EPAM's Front-End lab
- Participant in the Mentoring program - helped others to become stronger developers.

Of course, during this time, my hard and soft skills sky-rocketed, as it was also a challenge for me to improve. Worked with **React, Node.js with AWS, Angular, and PostgreSQL**

Previous experience

Ciklum: 2018.06 - 2019.06(1y) / M+. Front-End

Full time

Worked with:

- 3 SPAs with **Angular 6** + 1 legacy SPA on **Riot.js**
- Great experience with integration testing using **Karma**
- Created architecture for functional end2end tests with **Protractor and Cucumber.js**
- Worked with functional e2e tests on **Kotlin**
- Created great improvements for CI/CD on the project
- Understood and invested my work in Business
- Worked with hard Delivery System and multi-environment system

Mobilunity: 2017.10 - 2018.06 (9 m) / M. Full Stack

Full time

Developed and created architecture for:

- 2 separate SPAs with **Angular**
- 2 related **Angular** SPAs with shared code-base
- API with **Node.js/Express/Adonis.js**
- **extension for Chrome** - Vue.js(as MVP) and later with Angular

Finance Magnates: 2017.04 - 2017.10 (7 m) / M. Full Stack

Full time

Single Page Application for Company's needs.

React / Node (Express.js); git; Jira.

Keepit: 2016.02 - 2017.04 (1y 3m) / J. Front-End

Full time

Backup-oriented company. Worked on 2 (two) versions of SPA:

- **Vanilla + jQuery** (no framework)
- **AngularJS 1.5**

Education

Khmelnitskyi National University

2022 - ongoing

Ph.D. of Computer Science.

National University "Lviv Polytechnic"

2017

Master of Computer Science.

National University "Lviv Polytechnic"

2016

Bachelor of Computer Science.
